822 Heat and Air Expands Commercial HVAC Service and Installation Offerings

August 19, 2026

Benbrook, TX - August 19, 2026 -
822 Heat and Air has expanded its commercial HVAC installation and AC repair services to better serve businesses throughout the greater Dallas-Fort Worth Metroplex. The expansion broadens the range of solutions available to commercial property owners and managers seeking reliable heating, cooling, and ventilation systems.

The expanded offerings include the installation of high-efficiency central air systems, rooftop units, split systems, advanced ventilation systems, precision-engineered ductwork, energy-efficient heat pump systems, and comprehensive chiller system installations. The company has also strengthened its capabilities in the integration of building automation systems, complete commercial HVAC replacement, service, and repair.

As a Duncanville Commercial HVAC provider, the company addresses the growing demand among area businesses for systems that reduce operational costs while supporting a greener environment. Commercial properties often require tailored heating and cooling configurations, and the expanded service list allows the

company to meet a wider variety of building requirements across the region.

The work is carried out by a team of certified technicians who handle each installation with attention to precision and long-term performance. From the initial consultation through post-installation maintenance, the company provides comprehensive support intended to keep commercial systems operating efficiently throughout their lifespan.

"The expansion reflects the needs communicated by commercial clients across the DFW area," said David, a spokesperson for 822 Heat and Air. "Businesses want systems that are dependable and efficient, and they want a single provider that can handle installation, service, and ongoing maintenance without gaps in support."

Energy efficiency remains a central focus of the expanded services. The company prioritizes solutions designed to lower energy consumption in commercial environments, an approach that aligns with rising interest among property owners in reducing utility expenses and environmental impact. The building automation integration further supports this goal by allowing commercial facilities to monitor and adjust their heating and cooling systems with greater accuracy.

"Every commercial building presents different demands, whether it involves a rooftop unit, a chiller system, or a fully automated setup," David said. "The broader range of services allows the team to match the right configuration to each property and to support that system well after the installation is complete."

822 Heat and Air serves a wide territory that includes Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, Dallas, and the surrounding suburbs. The company handles both commercial and residential projects, giving property owners access to a single HVAC company for a variety of heating and cooling needs.

822 Heat and Air is a professional heating, ventilation, and air conditioning contractor providing commercial and residential services throughout the greater DFW Metroplex. The company specializes in complete HVAC installation for large-scale commercial and residential customers and also offers ductwork, AC tune-up services, repair, and maintenance. Operating under license number TACLA65080C, the company focuses on energy-efficient solutions and comprehensive support from consultation through maintenance. Financing options are available subject to credit approval and offer eligibility, with terms arranged directly between the customer and the chosen finance company.
