822 Heat and Air Expands Commercial and Residential AC Repair Services Across Greater DFW

August 28, 2026

Benbrook, TX - August 28, 2026 -
822 Heat and Air, a heating and cooling contractor based in Cedar Hill, Texas, has expanded its commercial HVAC installation and air conditioning repair services to meet growing demand across the Greater DFW Metroplex. The expansion reflects an increase in requests from both large-scale commercial clients and homeowners seeking complete system installations and dependable service.

The company specializes in full HVAC installation for commercial and residential customers, along with routine maintenance, diagnostic work, and full system replacements. With the expanded offering, 822 Heat and Air aims to serve property owners, managers, and business operators who need everything from seasonal tune-ups to complete system overhauls.

The expansion arrives as many property owners face aging equipment and rising energy costs. According to the company, uneven cooling, unusual noise, and climbing utility bills often signal that a system requires professional attention before a full breakdown occurs. The expanded ac service program is designed to

address these issues through diagnostics that identify refrigerant leaks, electrical faults, compressor problems, and airflow concerns.

"The demand for reliable HVAC work has grown steadily across the region, and expanding the services allows the team to reach more commercial and residential clients who depend on comfortable, energy-efficient buildings," said David, a spokesperson for 822 Heat and Air. "The focus remains on thorough diagnostics, proper load calculations for new installations, and transparent pricing that customers can understand before any work begins."

For homeowners, the company continues to provide residential ac repair that covers routine checks, targeted repairs, and complete replacements when a unit reaches the end of its lifespan. The technicians are licensed, insured, and experienced with modern high-efficiency equipment, allowing them to handle both older systems and the latest installations.

The commercial side of the expansion focuses on installation, repair, and maintenance for commercial buildings, where heating, cooling, and ventilation needs often require personalized solutions. The company's ductwork services support efficient air distribution in both commercial and residential settings, while AC tune-up service helps prevent breakdowns and extend equipment life.

"A properly installed system starts with accurate load calculations and quality workmanship," David added. "Whether the project involves a single home or a large commercial property, the goal is to deliver work that holds up over time and keeps buildings comfortable through every season."

822 Heat and Air provides service throughout Cedar Hill and surrounding communities, including Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, Dallas, and the broader DFW area. The company offers emergency AC repair, seasonal maintenance, and complete system installation for properties in need of new equipment.

822 Heat and Air is a professional HVAC company serving commercial and residential clients across North Texas. The company provides Commercial HVAC, Residential HVAC, ductwork, and AC tune-up services, with a stated commitment to comfortable, energy-efficient homes and businesses throughout the year. Its team of trained and licensed technicians uses current technology and techniques to deliver installation, repair, and maintenance work, and the company offers financing options subject to credit approval and offer eligibility.
